

OSChanger benefits to RTOS Vendors

You may have already convinced your customer to go with your RTOS. Now, make the transition easier and cheaper for them with OSChanger compatibility APIs.

OSChanger allows customers to:

- Re-use existing code base and greatly reduce development/testing efforts
- Port open source and/or other solutions to theirs easily
- Reduce porting related risks
- Have a smooth and successful RTOS transition
- Use a familiar API to get the job done much faster

When times are totally against starting new developments from scratch, we consistently allow customers to recycle existing application/driver code base and get going fast.

Though many times the porting effort is underestimated, the reality is that, it is fraught with danger and risk (this is something we have heard from our customers). You will start to discover the issues once you jump in. OSChanger is a low cost alternative to get the port done quickly and safely and help customer's products get to market faster. Successful and timely completion of the first project by your customer is crucial for repeat business from them as well as their downstream customers.

Our feature-rich OSChanger solutions are widely used, robust and well supported and is straightforward to use. Overall, our implementation is based on compile-time translations to provide you the best performance while accomplishing the lowest foot print requirement.

Why not make it easy for your customers to adapt to your RTOS? Indeed, they will be very thankful.
